Fax: (856)-457-5570

August 18, 2016.

To Whom It May Concern:
The table below details the ten substances and their associated limitations defined in Directive 2011/65/EU- amendment Directive (EU) 2015/863 (RoHS2). These substances are not present in the nylon and poly materials from KNF Clean Room Products Corporation.

Material	Maximum Concentration Value
Lead (Pb) Mercury Hexavalent Chromium (CrVI) Polybrominated Biphenyls (PBBs) Polybrominated Diphenyl Ethers Bis(2-Ethylhexyl) phthalate (DEHP) Benzyl butyl phthalate (BBP) Dibutyl phthalate (DBP) Diisobutyl phthalate (DIBP)	0.1 wt% per homogeneous material
Cadmium	0.01 wt% per homogeneous material

The above maximum concentration values apply to each homogeneous material rather than a product or a part itself. A homogeneous material means material of uniform composition throughout that cannot be mechanically separated into different materials.

Very truly yours,

KNF Clean Room Products Corporation
