To Our Valued Customer:

Please be advised that, under proper conditions and used as intended, the shelf life of KNF Clean Room Products Corporation's Sterilization Bags is up to five years. There are several conditions which will decrease the life of Sterilization Bags:

(1) Radiation will degrade a polypropylene product. The degradation is dependent on the amount of radiation and the distance from the source.

(2) High temperatures can cause polypropylene to melt. High temperatures are usually defined as 121-123˚C.

(3) Exposure to certain chemicals will weaken the product.

(4) Exposure to fumes from propane or gas heaters will discolor the product.

These are the most common problems that affect Sterilization Bags. DuPont has conducted sterility testing for a 5-year study of Tyvek 1059B.

We appreciate your interest in our material, and if we can be of further assistance, please do not hesitate to contact us.

Very truly yours,

Analia Almiron
